

Blogging and Blogging Tools: 20+ I Use and Love in 2024

“Check out my favorite Blogging and Blogging Tools of 2024. These tools will help you plan, write, optimize, and promote your blog!”

I started blogging in 2022, and it's been a journey with both highs and lows.

One minute, you are getting inspired, and then the next minute, you are stuck on what to do next.

During my early days, there were days I almost gave up, and I would tell myself I should just focus on being an SEO specialist because it just seemed like a whole lot.

However, my passion for teaching others how to build a successful business through online marketing kept me going.

The pressure of creating valuable content, doing keyword research, making images, promoting posts, and more felt exhausting, especially the time it took to write each post.

Imagine spending days or even weeks just writing one blog post(There was a time I took seven whole days writing a 1500 blog post)

Now that I look back at that moment, I guess the reason why it was overwhelming for me was that I had to figure out pretty much everything from scratch.

But compared to my early days of blogging, there are now so many tools available that make the process much easier, and because of that, I don't think I have ever loved blogging as much as I do now.

In this post, I want to show you over 20 of the best blogging tools that have become indispensable to me.

These tools will help you write better, publish faster, and rank higher on search engines. This means more visitors and quality leads for your blog!

To make things easier, I have split this list into several categories covering tools for blog hosting, planning, writing, promotion, SEO, email marketing, etc.

Let's get started!

Tools for Blog Hosting

While CMS (Content Management System) is the system that helps you create and manage your website, web hosts, on the other hand, are like the services that make your site available online.

There are two types of blogs: self-hosted and hosted.

Hosted websites offer an all-in-one solution, providing hosting and file storage.

When I first started and heard of hosted websites, it sounded perfect to me because it seemed to have all the things I required until I discovered my blog was going to be limited to its tools and templates.

On the other hand, self-hosted websites are more flexible. You can customize them however you want, but you have to buy web hosting and then a domain for your site's URL.

A reliable hosting tool keeps your blog fast, secure, and always up.

Let's take a look at some of the web hosts I have used that I love and can help you get started!

1). [Bluehost](#)

The screenshot shows the Bluehost homepage. At the top is a navigation bar with links for WordPress, Web Hosting, Domains, Email, Agencies, Hire a Pro, Pricing, Help, Login, a shopping cart icon, and a USD currency selector. The main hero section has a blue background with the text 'WORDPRESS, WEB HOSTING, DOMAINS' and 'WordPress website creation made easy.' Below this is a yellow 'Get Started' button and a 'Recommended by WordPress.org' badge. To the right is a circular image of a woman smiling while using a laptop, with a 'Plants Factor' website preview and a 'Super High Speed' badge. Below the hero section are four service tiles: 'WordPress Hosting' (Get your WordPress site online fast. Learn More →), 'Online Stores' (Sell goods and services effortlessly. Learn More →), 'Cloud Hosting' (Try ultra-fast hosting with 100% uptime. Learn More →), and 'Design Services' (Let us handle your website and SEO. Learn More →). At the bottom is a domain search bar with the text 'Start brainstorming your domain', a '.com' dropdown, and a 'SEARCH' button. Below the search bar is a Trustpilot rating of 4.1 out of 5 based on 14,520 reviews, with a 'Great' label and five stars. There is also a 'Trustpilot' logo and a 'Activate Windows' notice.

If you're a blogger, you've probably heard of Bluehost. They're one of the largest, most popular web hosting companies out there.

So, of course, when I started blogging, I followed the herd and opted for a self-hosted WordPress blog and signed up with Bluehost.

Ever since then, [Bluehost](#) has been one of my top choices for a self-hosted WordPress.org blog. Free platforms like Squarespace or Wix have limitations when it comes to customization and monetization.

With these free platforms, one does not truly own one's blog. You, of course, have the copyright to your content, but you don't own your own website.

These platforms can shut down your blog without notice if you violate their terms, even accidentally.

But with Bluehost, I had more control over my blog.

It's budget-friendly and packed with features that make blogging easy, which is why it's my number one recommendation for a beginner.

Starting with Bluehost required minimal investment, and they offered a free domain for the first year, which was a big help.

The setup process is straightforward with their easy-to-use control panel and one-click WordPress installation. This means you can get your blog up and running quickly in no time.

So, do yourself a favor and start on the right foot with self-hosted WordPress.

Why I love Bluehost:

- **Easy Setup:** Bluehost made getting my blog online so simple
- **Great Performance:** My site loaded fast and was always up.
- **24/7 Support:** Anytime I have a question, their support team is there to help.
- **Free Domain:** I got a free domain for the first year, which was a nice bonus.
- **Affordable Pricing:** It's budget-friendly and the perfect solution for anyone who has just started their blogging journey.
- **WordPress Integration:** Works easily with WordPress, making content management easy.

Best For:

Bluehost is perfect for new bloggers who want an affordable and easy-to-use tool to start their blogging journey.

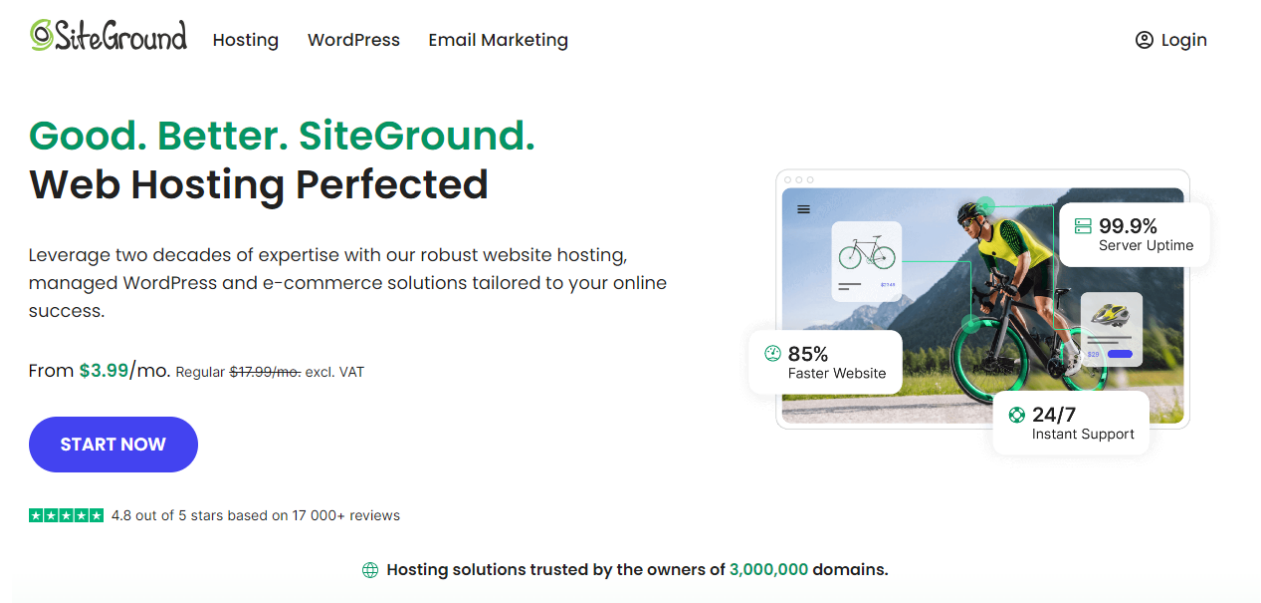

It's especially great if you're looking to create a professional blog without dealing with complicated setups.

The platform's reliable performance and excellent support make it ideal for beginners and small business owners who need a dependable hosting service.

Plus, if you're planning to grow your own blog over time, Bluehost's scalability ensures that your site can handle more traffic as your audience expands.

[Pricing](#): Paid plans start at \$2.95 a month.

2). [SiteGround](#)

The image shows the top portion of the SiteGround website. At the top is a navigation bar with the SiteGround logo on the left, followed by links for 'Hosting', 'WordPress', and 'Email Marketing'. On the right side of the navigation bar is a 'Login' link. Below the navigation bar is a large green headline that reads 'Good. Better. SiteGround.' followed by a sub-headline 'Web Hosting Perfected'. Underneath the headline is a paragraph of text: 'Leverage two decades of expertise with our robust website hosting, managed WordPress and e-commerce solutions tailored to your online success.' Below this text is a pricing line: 'From \$3.99/mo. Regular \$17.99/mo. excl. VAT'. A prominent blue button with the text 'START NOW' is positioned below the pricing. To the right of the text is a graphic featuring a cyclist on a road bike, with several callout boxes highlighting key features: '85% Faster Website', '99.9% Server Uptime', and '24/7 Instant Support'. At the bottom of the hero section, there is a star rating of 4.8 out of 5 stars based on 17,000+ reviews, and a statement: 'Hosting solutions trusted by the owners of 3,000,000 domains.'

As I mentioned previously, I started my blogging journey with Blue Host, but recently, as my blog began to grow, I decided to switch to Site Ground due to the amount of traffic I was getting on my site.

If you have a lot of traffic, let's say up to 10,000 visits/month or more, it automatically means your servers have more work to do.

In that case, you want to make sure you have a server that's speedy and doesn't have a lot of downtime.

For me, SiteGround was the web host that could do just that for my blog.

SiteGround offers reliable, secure hosting, and their support is top-notch. Anytime I had an issue or question, their customer service was fast to respond and very helpful.

One of the things I love most is their uptime. My blog is always up and running, which keeps my readers happy and engaged.

Plus, knowing that my data is safe with their free daily backups gives me peace of mind.

Why I love SiteGround:

- **Excellent Uptime:** I've experienced nearly 100% uptime.
- **Fast Performance:** With features like SSD storage and NGINX caching, my site loads quickly.
- **Great Support:** Their support team is always helpful and responsive.
- **Free Daily Backups:** Peace of mind knowing my data is safe.
- **Easy WordPress Integration:** One-click installs and seamless updates.
- **Free SSL Certificates:** Enhances site security.

Best For:

I highly recommend SiteGround for bloggers who want a reliable and fast hosting solution. It's especially great if you need strong support and high uptime.

[Pricing:](#) Paid plans start at \$3.99 a month.

Tools for Content Management

Starting a blog means building a website, and every website will need a Content Management System (CMS). The most popular CMS for blogs is WordPress, which I use and love.

But I get it – WordPress can be quite difficult for beginners. It takes time to learn themes, plugins, and even design.

Sometimes, you might even need to hire a developer to get everything just right.

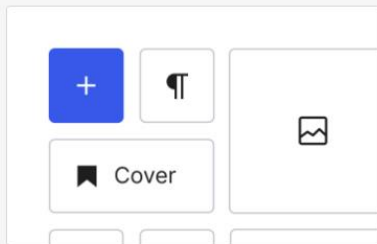

If you want something super easy to get your blog up and running in less than an hour, check out these WordPress alternatives I've found.

You'll love how simple it is to manage your content on these platforms, but first, let's take a minute to look at WordPress.

3). [WordPress](#)

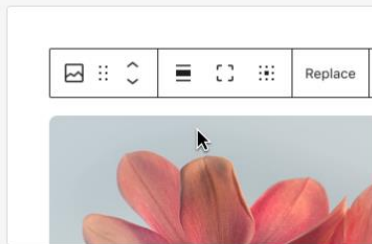

Meet WordPress

The open source publishing platform of choice for millions of websites worldwide—from creators and small businesses to enterprises.

Design

Create any website with flexible design tools and the power of [blocks](#). Start with a blank canvas or choose a [theme](#). Customize every detail—no code needed.

Build

See how your site will look in real time, even as you add, edit, and rearrange content—with intuitive editing and integrated features to manage it all.

[Try the Block Editor](#)

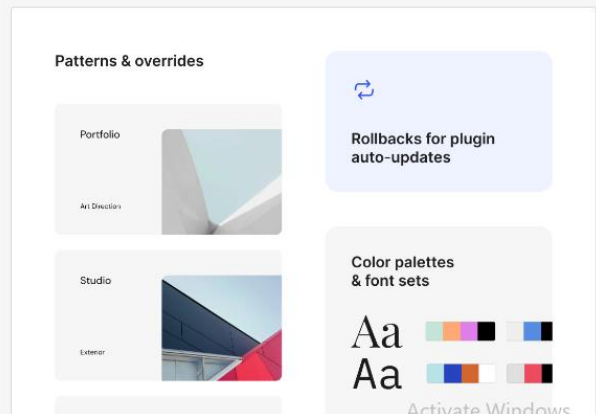

Extend

Make your site do whatever you need it to. Add a store, analytics, newsletter, social media integration; you're in control with an extensive library of [plugins](#).

See what's new

Bring style and finesse to your site-building experience with WordPress 6.6. This release includes more design options for Block themes, a new layout for quick page previews in the Site Editor, and rollbacks for plugin auto-updates.

[Discover WordPress 6.6](#)

[WordPress](#) is arguably the go-to choice for many bloggers.

When I first started blogging, WordPress was the first CMS I used because that was the only content management system I had heard of.

Although it took me a while to understand the use of these numerous features, but as I started using WordPress, it became easier for me, and I don't regret using it at all.

Many sites use WordPress, whether for full blogs or just occasional posts. You can get a free site with a “**wordpress.com**” tag or pay for your own domain. Both options work well with plugins and design themes.

To start, pick your domain name and choose your pages and design. Everything is easily managed from the WordPress dashboard, where you can edit and update at any time.

You can use ready-made themes, which are great if you don't know much about design, or customize your site to match your needs.

WordPress also has the Yoast SEO plugin to help you optimize your content. There are many other plugins to improve how your site looks and works.

Why I love WordPress:

- **Easy to Use:** Setting up your blog and managing content is so simple.
- **WordPress Plugins:** There are plugins for everything from SEO to social media.
- **Themes:** Thousands of themes let you design your blog just the way you like.
- **Free Tool:** The basic version of WordPress is free, making it accessible to everyone.
- **SEO Friendly:** Built-in features and plugins help improve your blog's search engine ranking.
- **Community Support:** A huge community offers support, tutorials, and resources.
- **Mobile Friendly:** Most themes are responsive, ensuring your blog looks great on all devices.

Best For:

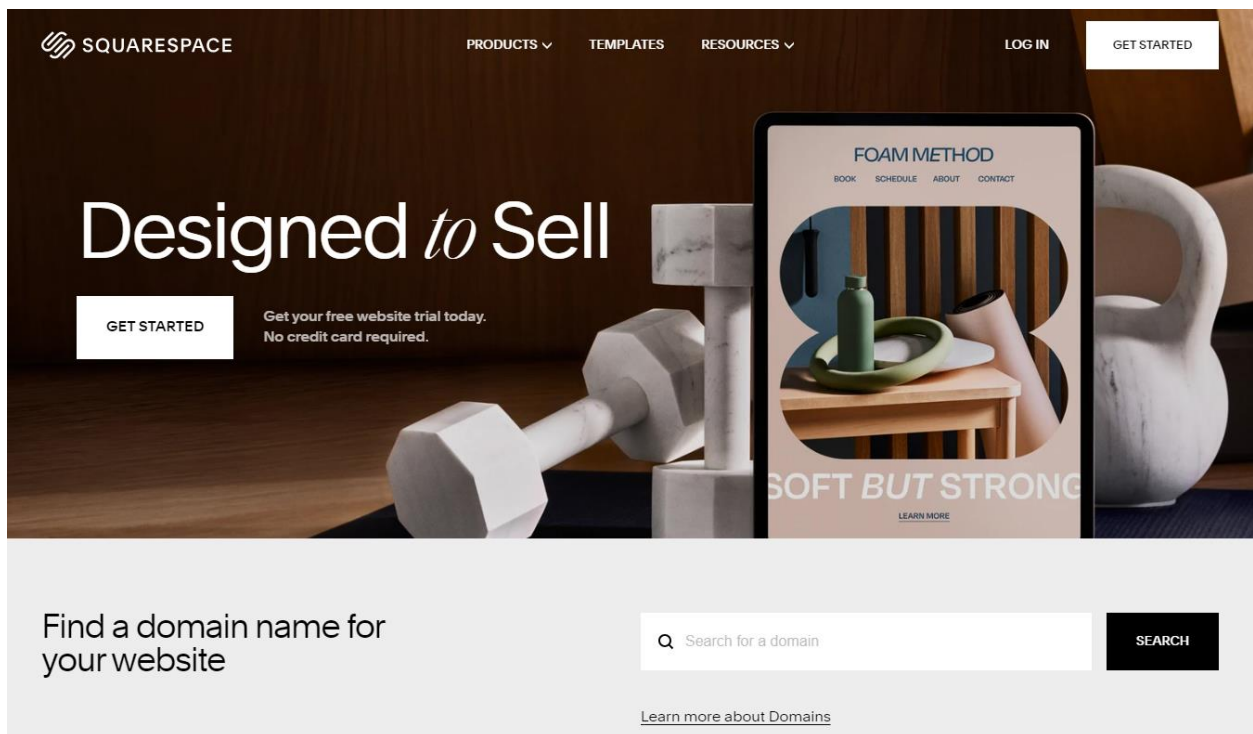

WordPress is great for any blog owner, and it's powerful enough for experienced bloggers who want a lot of customization options for their sites.

If you have the time, money, and know-how to manage the design and upkeep, WordPress is ideal.

Once you get the hang of it, WordPress becomes an amazing tool for building and running a blog just the way you want.

Pricing: Free

4). [Squarespace](#)

[Squarespace](#) is an excellent tool for turning any idea into a reality.

It offers top-notch templates that you can tweak to suit your professional needs or match your personal style.

I used Squarespace for just some months because I was hearing about the amazing features, and I must say it did live up to the hype.

One of my favorite features is the customizable galleries and the fact that there are password-protected pages for private projects.

Plus, its blogging tools let you share stories, announce products, or post company news easily. You can categorize, schedule, and share your posts to keep everything organized.

Squarespace has great publishing tools with 100 premade sections, portfolio page options, and pre-built color palettes to spark your creativity.

For marketing, Squarespace offers email campaigns, promotional pop-ups, a notification bar, and social media posts on Instagram, Facebook, and Pinterest.

With in-depth analytics, you can see where your traffic comes from and how visitors interact with your content.

It's a handy, all-in-one solution for any blogger or business owner.

Why I love Squarespace:

- **Amazing Templates:** Beautiful designs you can customize to fit your style.
- **Showcase Your Work:** Customizable galleries to display your projects.
- **Easy Blogging:** Share stories, announce products, and post news with ease.
- **SEO Built-In:** Tools to help your site rank better on search engines.
- **Traffic Insights:** See where your visitors come from and what they like.

Best For:

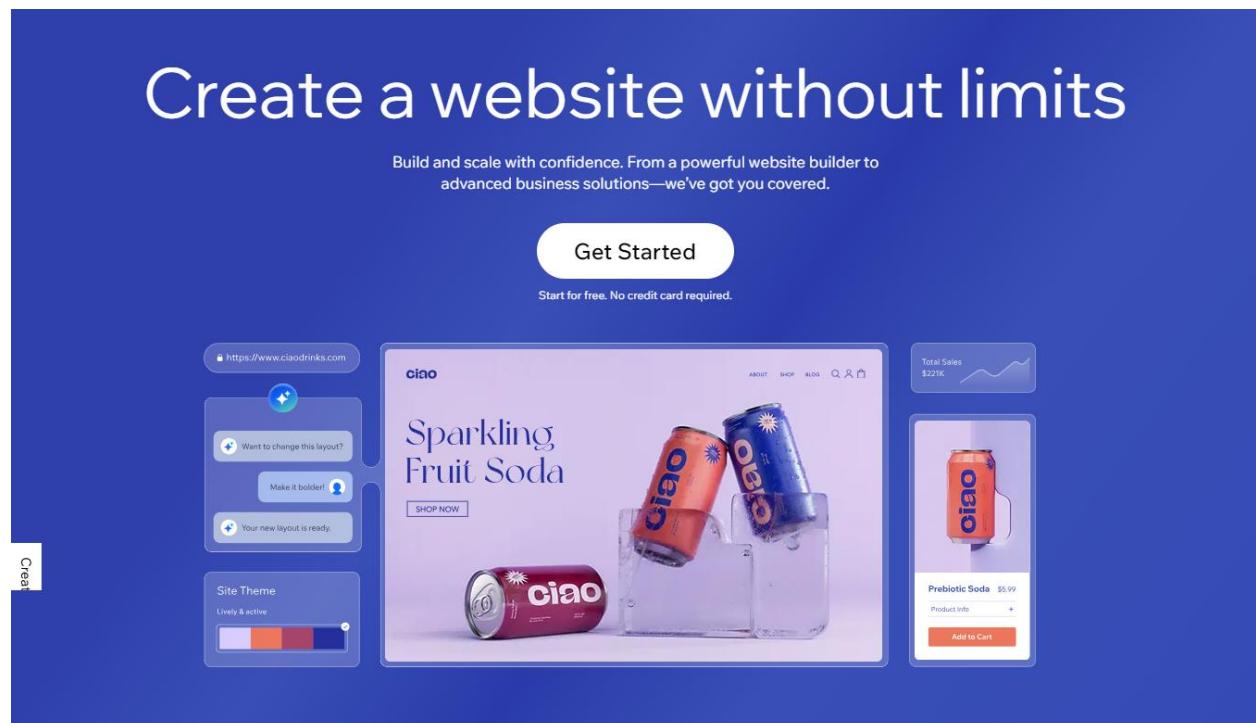

Squarespace is best for bloggers who want a stylish, customizable blog.

It's perfect if you want to showcase your work, share your stories, or keep your audience updated with the latest news.

It doesn't matter if you're an established blogger looking for a polished portfolio or a hobbyist wanting to share your passions. Squarespace is a great content management system for you.

[Pricing](#): 14-day free trial. Paid plans start at \$16 a month.

5). [Wix](#)

[Wix](#) is a free, easy-to-use blogging platform that lets you create stunning websites. With its drag-and-drop templates and free hosting, setting up your blog would be no problem.

It's amazing how, with Wix, you get two options: Wix Editor, which offers a simple drag-and-drop editor, and Wix ADI, which creates a unique design based on your input.

With over 500 templates, you can make your blog look amazing.

Wix helps you create professional-looking blogs for any niche. It's user-friendly, so you can get your blog up and running in minutes.

Wix can also guide you in creating a content plan for your blog.

Plus, Wix offers tools to help you stay organized and create focused, value-driven content. It's a great way to make your blog stand out!

Why I love Wix:

- **Drag-and-Drop Editor:** It is super simple to design your blog exactly how you want.
- **Wix ADI:** This feature designs your site based on your answers to a few questions.
- **500+ Templates:** Tons of choices to make your blog look unique and professional.
- **Free Hosting:** No need to pay extra to keep your blog online.
- **Built-In SEO Tools:** Helps your blog get found on search engines.
- **Social Media Integration:** Easily connect your blog with your social media accounts.
- **Content Management:** Manage your posts and pages easily.

Best For:

Hobby bloggers, small business owners, and creatives who want to focus on their content rather than the blogging process.

Many built-in features will help you grow your audience, expand your business, and keep track of leads, conversions, and email subscribers.

If you love the idea of customizing your blog with drag-and-drop simplicity and using free blogging tools, I can guarantee that Wix is the right blogging platform for you.

[Pricing:](#) Free, Paid plans start at \$17 a month.

Tools for Blog Research

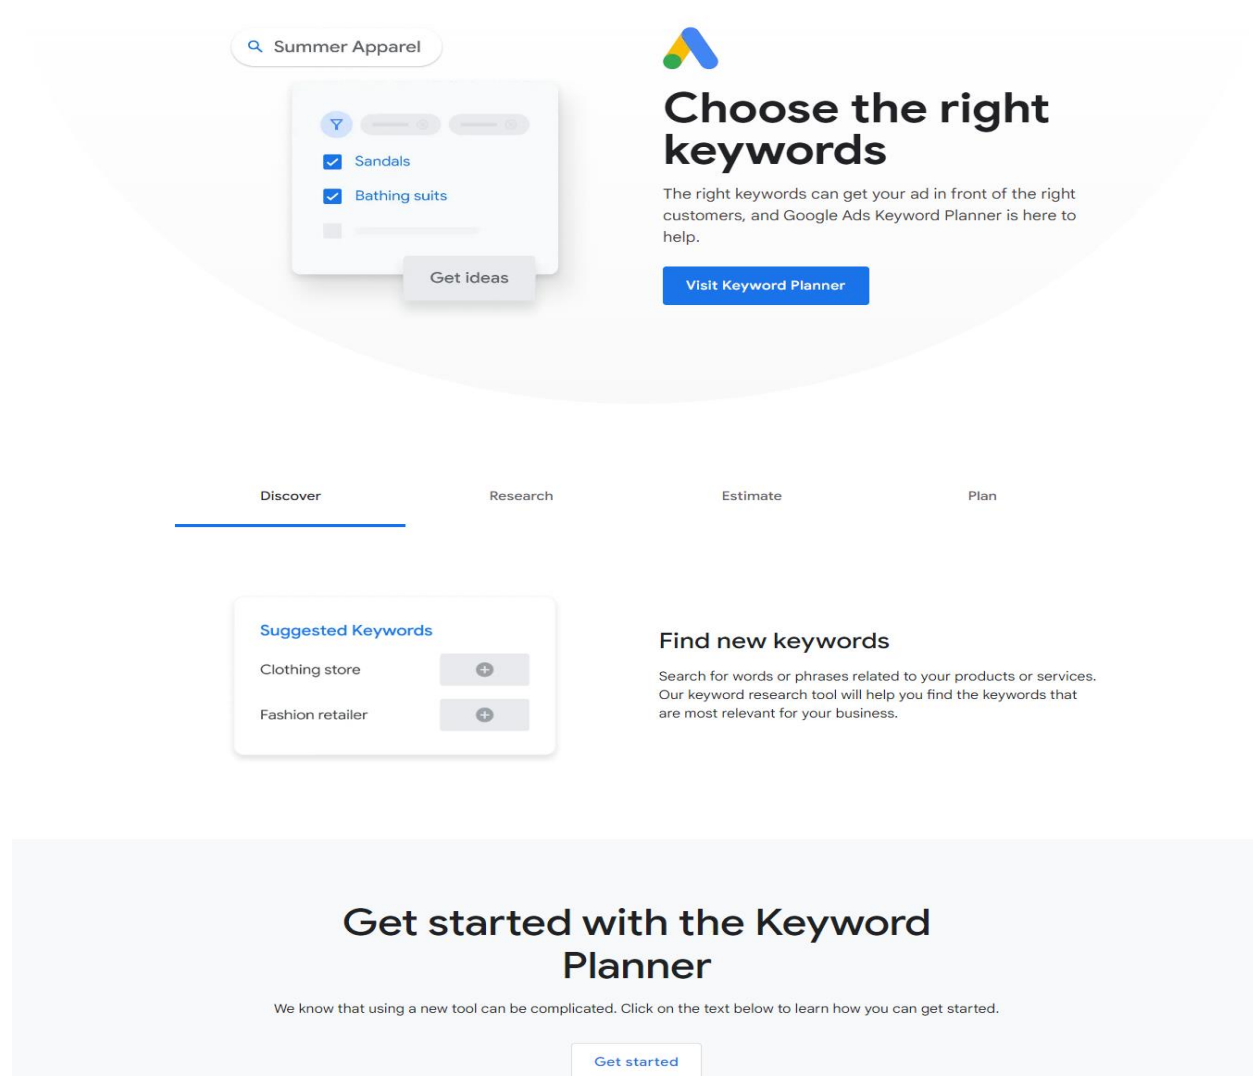

To help your content rank well on Google, it's a good idea to do some research first.

I love using keyword research tools to see what people are searching for and what's trending.

These tools help me discover popular topics and questions, making it easier to create content that my readers will love.

Let's check out some of my favorite blog research tools that can help you come up with great ideas and increase your blog's popularity.

6). [Google Keyword Planner](#)

Who would you want to contact to get your content to rank if not Google itself?

[Google Keyword Planner](#) can help refine your keywords based on what your readers are actually looking for.

When I'm prepping to write a blog post, I just enter my topic into the Keyword Planner. It shows me different word combinations, their search volume, and competition levels.

The results I get will determine the kind of content I want to write, and sometimes, these results spark some ideas for the blog post.

With this, I can create strong, targeted posts that rank higher in search results.

Using Google Keyword Planner, I recently created a strategy that got millions of clicks for an eCommerce brand.

So, you don't necessarily need any paid tool to do your keyword research; you can make use of this free tool, and all you have to do is create your Google Adwords account, which is very easy to set up.

After doing that, just enter your target keyword and add filters like the country you want to target.

This helps find keywords with good traffic and low competition. Plus, it's useful for identifying valuable PPC ad keywords.

If you're looking to improve your blog's reach, Google Keyword Planner is a must-have.

Why I love Google Keyword Planner:

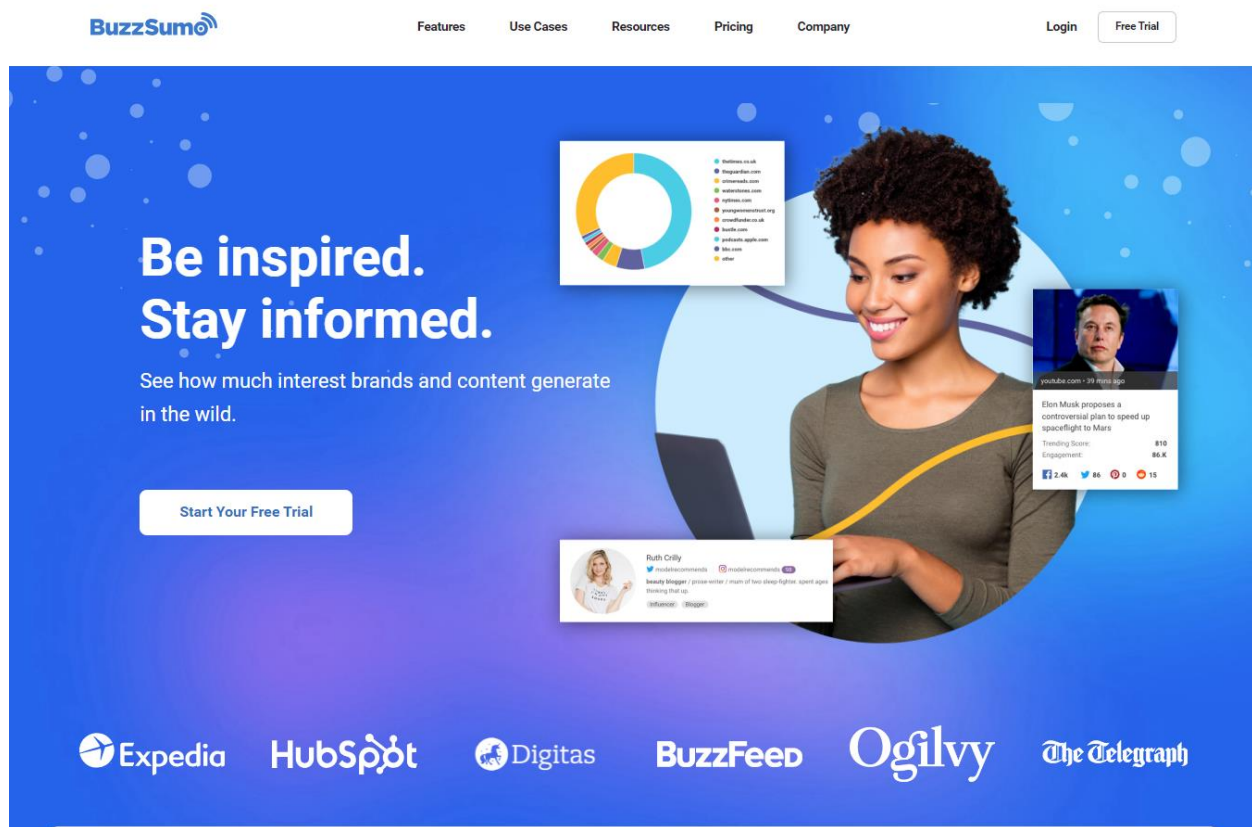

- **Keyword Ideas:** I use it to generate a list of keyword ideas from just one keyword.
- **Search Volume Data:** It shows how popular each keyword is, which helps me choose the best ones.
- **Competition Analysis:** It tells me how competitive each keyword is, making it easier to find good targets.
- **Related Keywords:** Offers related words and phrases, expanding my content ideas.
- **Traffic Estimates:** Gives traffic forecasts for keywords so I can plan my strategy better.
- **Easy Filtering:** I can filter results by location, language, and more to target precisely.

Best For:

New bloggers and marketers who are just learning about keyword research. It's easy to use and helps you find the best keywords to improve your blog's SEO and attract more readers.

[Pricing:](#) Free

7). [BuzzSumo](#)

With so much content out there, it's hard to keep up with trends and popular topics, but BuzzSumo makes it easier for me.

I use BuzzSumo for keyword research, finding influencers, and content curation.

One of the features I love the most is that it does more than just keyword research. It analyzes what works and what doesn't, predicting my content success.

In other words, Buzzsumo does a lot of the thinking for me.

It provides insights on trending content, helping me create targeted blog posts. It also tracks social performance across platforms like Facebook, Twitter, Reddit, and Pinterest.

With BuzzSumo, you can uncover popular questions and top-performing competitor content.

BuzzSumo is definitely a must-have in every blogger's toolkit!

Why I love BuzzSumo:

- **Content Analysis:** Helps me see what content works and what doesn't.
- **Predictive Insights:** Predicts future trends, saving me time on research.
- **Social Media Tracking:** Tracks what goes viral on social media.

- **Influencer Identification:** Finds key influencers in my industry.
- **Trending Topics:** Shows me trending content relevant to my blog.
- **Keyword Research:** Helps with keyword research to improve my blog's SEO.

Best For:

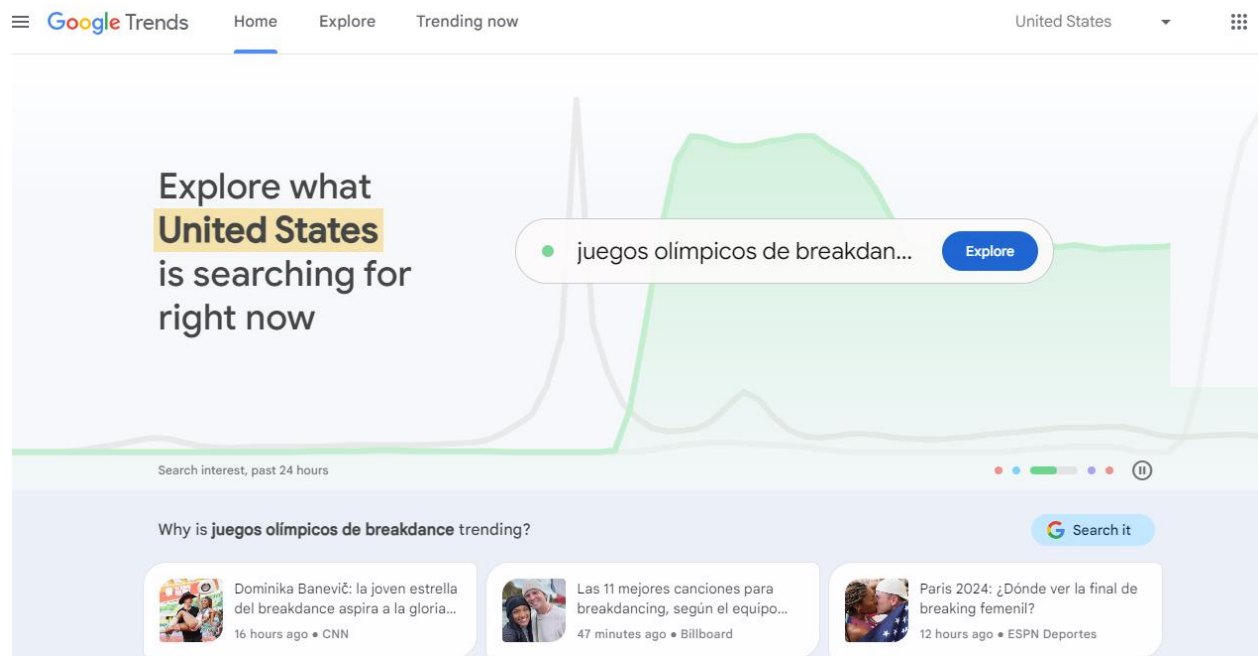

For any blogger who wants to create engaging and successful content.

It's a great keyword research tool that helps you stay on top of trends, find popular topics, and understand what your audience loves.

If you want to increase your blog's performance and reach, BuzzSumo is an excellent choice.

[Pricing:](#) Paid plans start at \$199 a month.

8). [Google Trends](#)

Regardless of what keyword research tool you use, you might want to make sure you are not targeting a topic that is trending downward in terms of search volume.

You have to identify topics that are on the increase by using another free Google tool called Google Trends.

If you want to see if your blog topic is popular, just use this tool to check the search volume for your keywords.

It shows how many people search for a word or phrase over time and when it trends. I use this tool with Google Keyword Planner, and it's very easy to use.

You don't even need a Google account. Just go to the Google Trends page to see trending stories at that time.

Next to each title, there are also small graphs that display the hours during which there was an increase in traffic for the related searches.

Many bloggers use it to stay updated on trends, explore keyword popularity, and segment results by images, news, web, and YouTube searches.

Why I love Google Trends:

- **Search Volume Data:** Shows how popular a keyword or phrase is over time.
- **Trend Analysis:** This helps me see when specific keywords are trending.
- **Comparison:** This allows me to compare the popularity of different keywords.
- **Geographic Data:** Provides information on where searches are most popular.
- **Category Filters:** Lets me filter by categories like web, news, images, and YouTube searches.
- **Real-Time Insights:** Keeps me updated on trending topics and search spikes.

Best For:

Freelance bloggers, marketers, and businesses of all sizes who need to understand the popularity of their products, services, or industry over time.

It's an essential tool for anyone publishing content online, and the best part is that it's free.

Whether you're planning your next blog post or a marketing campaign, Google Trends helps you stay ahead of the competition.

35 Euro Per Month - SEO Tools & Resources To Grow Your Search Traffic

View more Spaces >

Another approach to looking for blog post ideas is to see what questions have already been asked on one of the biggest social media networks dedicated to Q&A: Quora.

Quora is more than just a research tool.

As a blogger, it's one of my go-to resources for finding new topics to write about.

For those who haven't used Quora, It's a site where you can get answers and ask questions from other users.

Quora gets lots of traffic, so answering questions in detail can help direct targeted traffic to your blog.

Besides that, I draw inspiration for my writing based on the content on Quora I see on Quora.

It's helpful to know that your audience is interested in the latest social developments and to include these topics in your blog post ideas.

Quora's search function helps you find relevant topics that can take your blog from being invisible to visible.

It's a goldmine for blog research and engagement!

Why I love Quora:

- **Find Popular Topics:** Discover what people are curious about in your niche.
- **Keyword Ideas:** Gain keyword ideas from trending questions.
- **Inspiration:** Get inspired by the variety of questions and answers.
- **Targeted Traffic:** Drive traffic to your blog by answering relevant questions.
- **Audience Insights:** Understand what your audience is interested in.
- **Engagement:** Build a presence and interact with your audience directly.

Best For:

Bloggers who want to stay updated on popular topics and engage with their audience.

It's great for finding keyword ideas, getting content inspiration, and driving targeted traffic to your blog.

If you want to increase your blog's visibility and connect with readers, Quora is a fantastic platform for that.

[Pricing:](#) Free, Paid plans start at \$6.99 a month.

Tools for Blog Planning

So, you've done your keyword research, and now it's time to plan your blog posts.

With so much work going into the creation of just one blog post, even before you start writing, this is one step that can make things harder if you skip or otherwise if you don't.

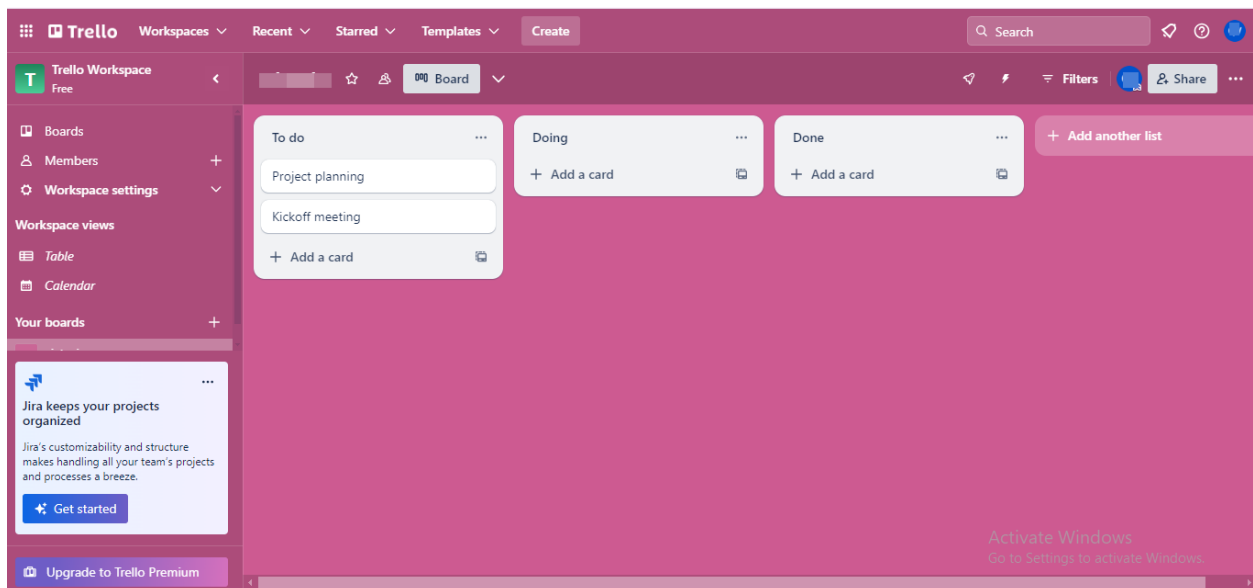

Personally, these tools have been a lifesaver for keeping my blog organized and ensuring I never miss a post.

Whether you're brainstorming ideas, scheduling posts, or managing your workflow, these tools make the whole process easier.

Consider these tools as to having a personal assistant for your blogging efforts, helping you stay on track and keep your content fresh and engaging.

Let's take a look at my personal bests.

10). [Trello](#)

Many people see blogging as just a ***“hobby.”***

Anyone who's experienced in running a professional blog—whether for commercial, educational, or branding purposes—knows it's a serious project. That's why I always plan out my blog posts before I start writing.

I am a big fan of Trello, and I am not just saying that out of exaggeration, but it really is one of the best blog planning free tools out there. It helps manage blog projects, tasks, and daily activities.

You can just log in, join a team, and start collaborating. It integrates with over 100 other tools like Google Drive, Slack, Jira, and others, making projects transparent and shareable.

I use Trello to add my blog post ideas, turning each idea into a card with notes and easily moving them around.

The ability to work and share ideas with other bloggers is simply amazing.

I love the fact that you can assign cards to writers (***If you work in a team***), add a due date, create checklists for each assignment, and even organize them into categories with color-coded tags.

Recently, Trello helped me manage the content strategy that took one of my posts to the number one spot on Google.

Why I love Trello:

- **Easy Organization:** Trello helps me organize my blog ideas into neat cards. Each idea becomes a card that I can fill with notes.
- **Drag-and-Drop:** Moving blog posts from one stage to another has never been easier.
- **Integration:** Trello works great with other tools like Google Drive and Slack, making my workflow better
- **Collaboration:** I can easily collaborate with other bloggers, sharing blog ideas and progress.
- **Visual Planning:** The visual boards help me see all my tasks and plans at a glance.
- **Customizable:** I can customize my boards to fit my blogging needs, from planning posts to tracking deadlines.

Best For:

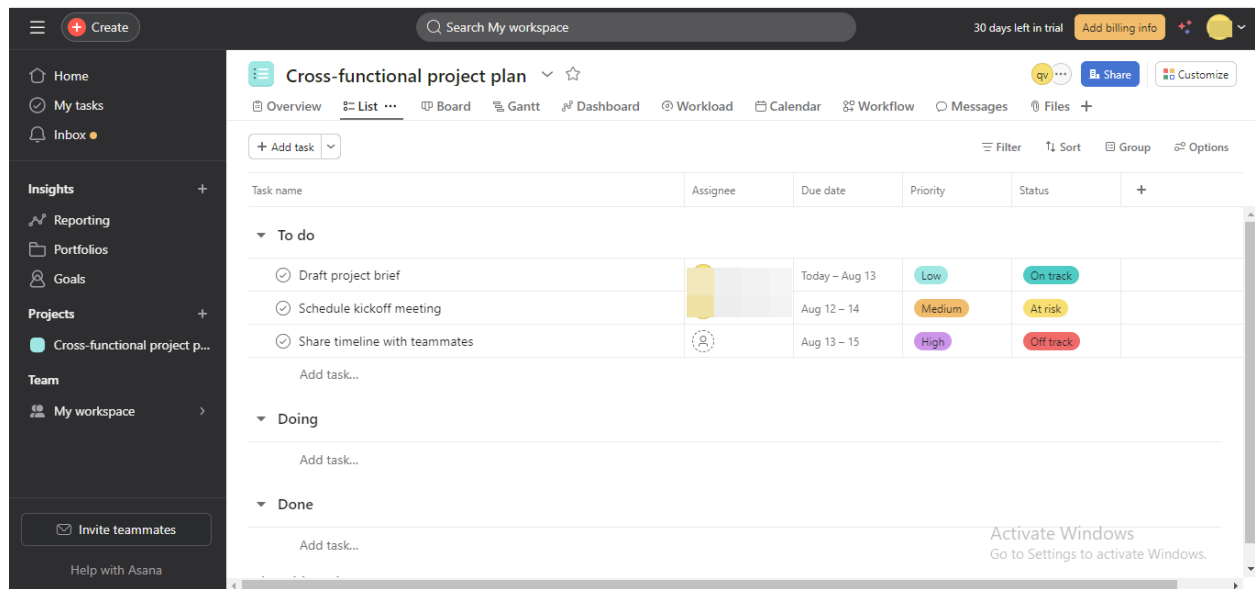

If you are a blog writer, Trello is a great tool to keep your blog ideas organized and easily accessible in just a few minutes.

It's especially useful if you work with a team or collaborate with other freelancers, but solo bloggers will find it helpful, too.

If you want a simple way to plan and manage your blog posts in a few minutes, I highly recommend Trello.

[Pricing](#): Free, Paid plans start at \$5 per month.

11). [Asana](#)

Another favorite blog planning tool I absolutely enjoy using apart from Trello is Asana.

It's free, which I love, though there are paid plans if you need more features. As a solo blogger, the free plan works perfectly for me.

I use Asana to manage my blogging workflow and love the Kanban-style boards. I have columns for each step: ideas, content to brief, in progress, for review, and published.

This setup helps me visualize projects clearly. Sometimes, I also use the calendar view to see deadlines and schedules at a glance.

Asana helps me to keep things organized by creating projects for daily, weekly, monthly, and quarterly tasks.

When working on big projects like a new course or a blog post overhaul, I create separate projects to keep everything organized and tidy.

If you work in a team, Asana is also one of the best collaboration tools.

Writers can see their assigned blog posts for the month, including a detailed description of what to cover and any other important attachments.

Why I love Asana:

- **Task Management:** Keeps my daily, and weekly, monthly and quarterly tasks organized.
- **Project Organization:** This allows me to set up different projects for pitching, writing, and editing.

- **Repeating Tasks:** Automatically schedules repeating tasks so I never miss a deadline.
- **Collaboration:** It makes it easy to work with others on my blogging projects.
- **Advanced Features:** Offers tools for tracking progress and managing complex projects.
- **Mobile Access:** Let's me update tasks and checklists on the go.

Best for:

Bloggers who need to organize their WordPress posts and manage their workflow easily.

It's a great tool for solo bloggers and blogs with several contributing writers who want to stay on top of tasks without feeling overwhelmed.

Whether you're managing a WordPress website or planning your content, Asana makes it simple and accessible.

[Pricing:](#) Free, Paid plans start at \$10.99 per month.

Tools for Blog Writing

As a blogger, one of the reasons why your content would rank is if it's high-quality content, and as I mentioned before, this is probably the activity that takes the most time.

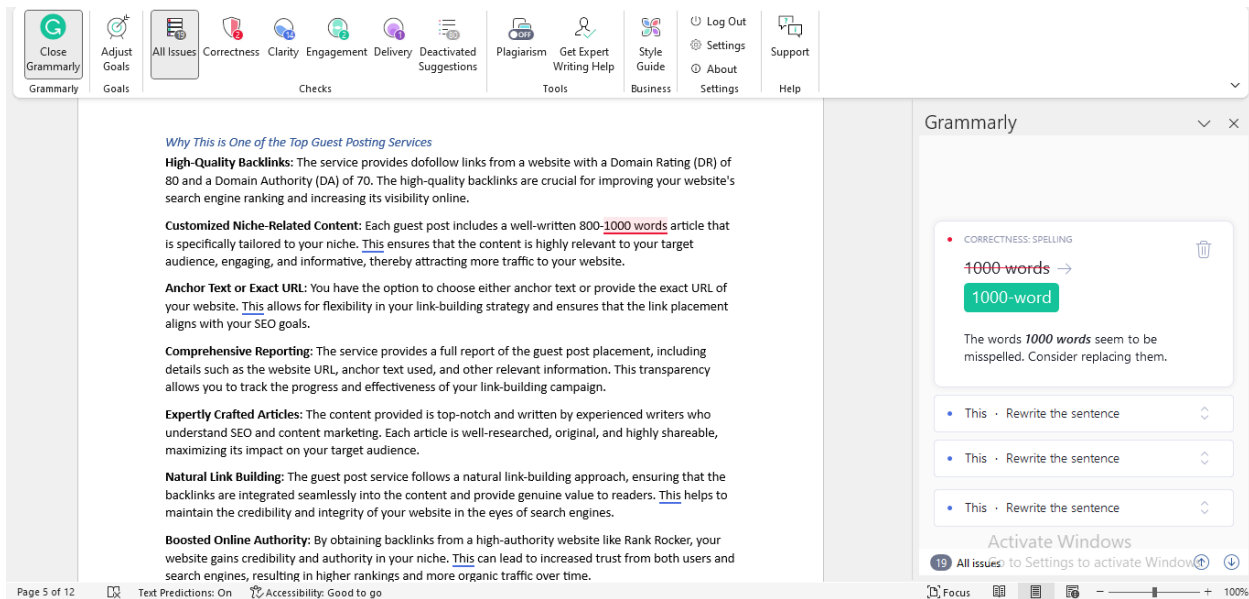

So, you've done your research and planning, and now it's time to write that post.

For some writers, this can be easy, and for others, it's not, but with the right tools, you can do this with ease.

After all, a blog post needs to be clear, readable, and relevant to your audience.

Here are some tools I use that can help you create great content.

12). [Grammarly](#)

I'm not a native English speaker, so my writing isn't perfect. Thankfully, Grammarly exists for bloggers and writers like us.

Grammarly is fantastic for writing long blog posts, emails, or articles. Its plagiarism checker is top-notch.

Grammarly has a free version that helps you correct and proofread your posts. It even suggests replacements.

I love using it to check grammatical errors and spelling mistakes in my blog and social media posts.

You can either draft or copy and paste your posts into Grammarly's editor or use the Google Chrome browser extension for real-time suggestions in Google Docs, X, LinkedIn, and more.

I prefer to use the Grammarly Chrome extension, though; it's fantastic and catches many errors.

I never publish or submit anything without first checking it with Grammarly Premium.

If you're on a tight budget, I strongly recommend this tool.

Why I love Grammarly:

- **Grammar and Spell Check:** Catches grammar mistakes and spelling errors in my blog posts and social media sharing.
- **Plagiarism Checker:** Ensures my content is original by checking for plagiarism.
- **Tone Detector:** Helps me maintain the right tone in my writing, whether formal or casual.

- **Style Improvements:** Offers suggestions to improve my writing style and readability.
- **Real-Time Editing:** The browser extension provides real-time writing tools and feedback in Google Docs and other sites.

Best for:

Blog writers and marketers who need a good editing tool that works with the writing tools they already use.

Since it works in Google Docs and on the web, it's perfect for editing long documents without needing to copy and paste into another grammar checker.

If you are also doing social media marketing alongside blogging, you can use Grammarly to cross-check your social copy before pushing it live on social media platforms.

[Pricing:](#) Free, Paid Plans start at \$12 a month.

13). [Hemingway Editor](#)

The screenshot displays the Hemingway Editor interface. At the top, there's a menu bar with options like 'File', 'Fix Grammar', 'Rewrite', 'Paragraph', and 'B I Q'. Below the menu, a green button says 'Fix Writing With AI'. The main content area shows a sample article titled '17 Best WordPress Themes for Personal Blog'. The article text is highlighted in various colors (red, orange, yellow, green) to indicate different types of writing issues. On the right side, there's a sidebar with statistics: 'Readability Grade 11', 'Words: 7,346', and '126 of 643 sentences are very hard to read'. At the bottom, there's a green button that says 'Find grammar and spelling issues with Editor Plus, Upgrade'.

An alternative to Grammarly that I love using is Hemingway.

It highlights complex and lengthy sentences, making your content easier to read and rank on search engines.

Different colors indicate tricky sentences and grammatical mistakes, helping you simplify your writing.

When I use it, I don't follow every suggestion because Hemingway aims to make a piece of content as simple as possible, which isn't always the goal.

Hemingway helps me catch run-on sentences and complicated vocabulary, making my writing clearer.

It identifies common errors like overuse of adverbs, confusing sentences, and passive voice.

The app has two modes—writing and editing. You can format text, create links, and switch modes easily.

Hemingway also provides readability scores and suggestions for improvement. You can even publish directly to WordPress or Medium from the app.

Why I love Hemingway:

- **Highlights Complex Sentences:** Helps me spot and simplify long, tricky sentences.
- **Color-Coded Feedback:** Uses different colors to show grammar issues and hard-to-read sentences.
- **Readability Scores:** Gives a readability grade to ensure my content is easy to understand.
- **Focus on Simple Writing:** Encourages shorter, clearer sentences for better readability.
- **Modes for Writing and Editing:** Switch between writing and editing modes to refine my text.
- **Export Options:** I can easily publish directly to WordPress or different social media platforms.

Best For:

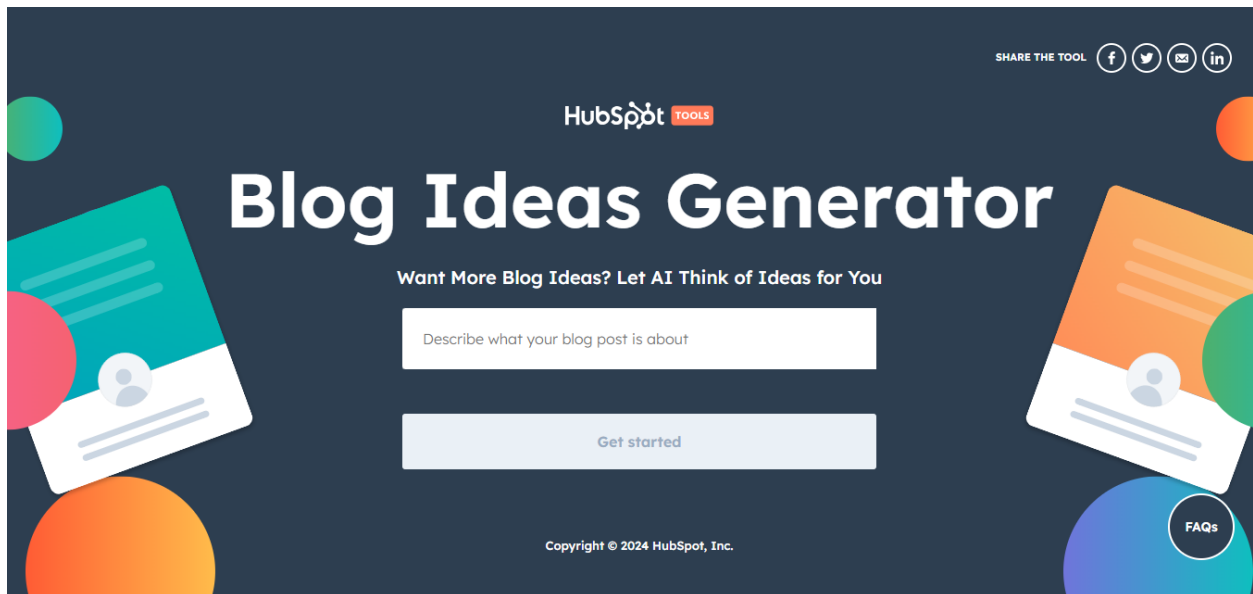

Hemingway is great for blog writers who want to cut down on errors, clichés, and redundancies.

It's best for shorter pieces with simple formatting because it doesn't work with rich-text editors like Google Docs or Microsoft Word.

However, it's perfect for distraction-free writing and editing. If you want clear, concise writing for your blog posts, Hemingway is a fantastic choice.

[Pricing:](#) Free, Paid Plans start at \$8.33 per month.

14). [HubSpot's Post Idea Generator](#)

Discover the advantages that make the Blog Topic Generator a must-have:

- **Access** a constant stream of blog ideas
- **Cut time-consuming** brainstorming
- **Gain valuable insights** with keyword suggestions and search volume data
- **Craft engaging content** tailored for your audience, not just algorithms.
- **Seamlessly integrate and publish** content directly into HubSpot CMS
- **Packed with innovative features** from ideation to publishing

Posting regularly is key to keeping your readership growing, but sometimes, coming up with great and catchy blog post ideas again and again is not always easy.

Every blogger, at one point or other, has experienced what they call ***“Writer’s Block.”***

At the beginning of my career as a blogger, I struggled with this for a while until I came across this tool.

HubSpot’s Topic Generator is a terrific tool for coming up with blog post ideas.

All you need to do is enter a few keywords to help narrow down your search, and this tool will generate ideas for you.

You can put up to five keywords into the search bar and click ***“Give me Blog Ideas”*** to get a list of five blog topics.

If you want even more ideas, you can fill out a form to get a whole year's worth of blog ideas and tips to boost your SEO.

Best of all, this tool is free, so it's worth trying out if you're not sure where to start.

Why I love HubSpot's Post Idea Generator:

- **Easy to Use:** Simply enter a few keywords, and it generates blog ideas for you.
- **Saves Time:** Quickly find multiple topics to write about without extensive brainstorming.
- **Keyword Integration:** Uses your keyword research to suggest relevant topics.
- **Inspires Creativity:** Provides a fresh perspective on your content ideas.
- **Customizable Results:** Enter up to five keywords for more tailored suggestions.
- **Always Available:** Keep it bookmarked for when you run out of ideas.

Best For:

New bloggers and content marketers who aren't sure how to use their keyword research. It's also great for experienced bloggers who need fresh ideas.

Even if you usually have plenty of topics, this tool can serve as a backup for those times when inspiration runs dry. It helps keep your content flowing and your blog engaging!

Pricing: Free

Tools for Blog SEO

Search engine optimization is important for your social media and blog content.

It helps ensure your site appears at the top of Google searches, keeping you on people's minds when they look for information in your niche.

Blog articles especially need a strong focus on SEO to perform well. The right SEO tools can boost your Google analytics scores.

I've put together a list of SEO tools for everyone, from beginners to pros.

These tools can help with various social media channels, meet your individual needs, and support different content ideas.

Let's take a look at them!

15). [Yoast SEO](#)

OUTRANK YOUR COMPETITORS, TODAY!

SEO starts with Yoast

Improve your website's SEO with straightforward tools and training.

Join 13+ million happy Yoast SEO users!

[Explore Yoast SEO Premium!](#)

[Learn SEO](#)

GET AHEAD OF THE COMPETITION

All the help you need for SEO

Whether you run a small business, a webshop, or a blog, Yoast SEO Premium ensures your website competes in the search results.

Yoast is a well-known WordPress plugin, maybe the most popular one, and it's for a good reason.

Whether you use the free or premium version, Yoast helps boost your SEO across your whole site.

It does this through keyword optimization, readability checks, and keeping up with Google's latest algorithms.

If you go for the premium version, you get extra features like help with internal linking and fixing broken pages.

One of the amazing features Yoast offers is the **"social cards"** tool. This helps you format social media posts correctly and lets you preview them before they go live.

I've used Yoast for years, and I still rely on it after almost eight years in digital marketing and SEO.

The features I find most useful are the title tag, meta description editor, URL, and schema markup.

When I started blogging, I wouldn't publish a post until I saw that green happy face in Yoast's interface.

It's like a little seal of approval that makes me feel confident my post is good to go.

Yoast SEO is all about improving your blog's on-page SEO.

It's similar to the Hemingway App and Grammarly in that it checks the readability of your text and gives you tips to improve grammar, sentence structure, and reading level.

But Yoast goes a step further with its SEO analysis. It suggests adding keywords, optimizing meta descriptions and URLs, and adding internal links.

For anyone serious about SEO, I suggest learning more about SEO beyond Yoast. However, it's a great tool to start with.

Why I love Yoast SEO:

- **Keyword Optimization:** This helps me find and use the right keywords to rank higher.
- **Readability Check:** Makes sure my content is easy to read and understand.
- **SEO Analysis:** Provides tips to boost my SEO, like adding meta tags and optimizing URLs.
- **Social Media Preview:** Formats and previews my posts for social media.
- **Internal Linking Suggestions:** Recommends links to other content on my site.
- **Fixes Broken Links:** Helps me spot and fix broken pages.

Best For:

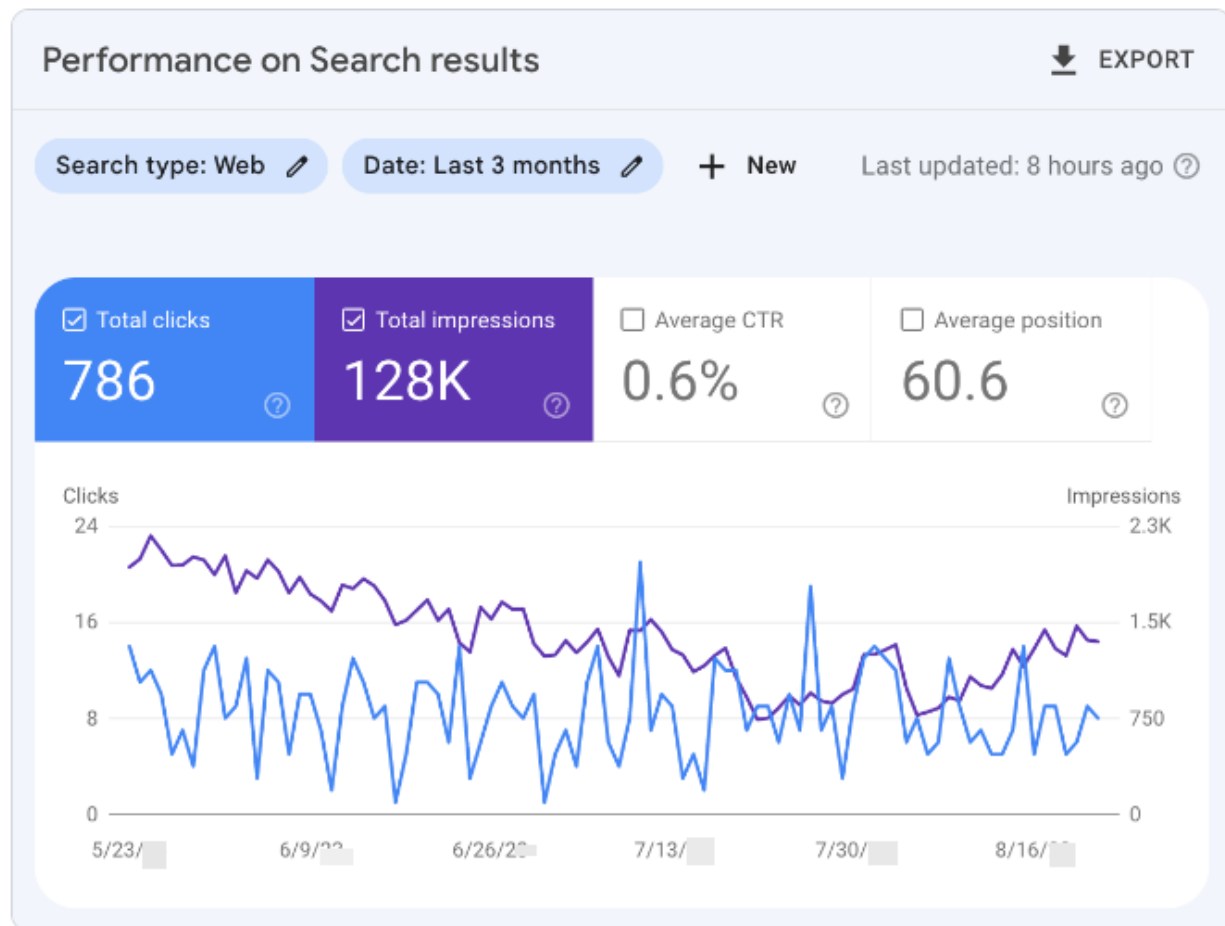

Yoast SEO is fantastic for bloggers of all levels. It's easy to use, and its guidance on keywords, readability, and meta tags can make a big difference in your blog's performance.

Plus, it's not just for WordPress; Yoast works with other content management systems, too.

This means no matter what platform you use, Yoast can help you optimize your posts and reach a wider audience.

[Pricing](#): Free, Paid Plans start at \$99 a month.

16). [Google Search Console](#)

Using great keywords and headlines is just the start. To see if your efforts are paying off, Google Search Console is your go-to tool.

It shows which keywords bring in the most readers and offers a wealth of data to help you improve your content.

I use Google Search Console to spot pages that are losing traffic over time.

Just go to the **“Performance”** report and compare the last three months to the previous three months (or longer).

If a page’s traffic has dropped, it’s time for a content refresh. I also keep an eye on my site’s overall performance and check for any issues like not passing Core Web Vitals.

Google Search Console offers all the insights you need to make your blog successful.

It gives you an overview of your website’s performance and usability. You can find out key details about your visitors, such as the devices they use and where they’re from.

It also runs performance tests in the background and alerts you to any issues that could impact your rankings.

Using Google Search Console has been a game-changer for me. It helps me keep my content fresh and my site running without any issues, ensuring I attract and retain more readers.

Why I love Google Search Console:

- **Performance Tracking:** See which keywords bring the most traffic.
- **Search Analytics:** Analyze clicks, impressions, and average positions in Google searches.
- **Index Coverage:** Check which pages are indexed and find any indexing issues.
- **Mobile Usability:** Ensure my blog performs well on mobile devices by identifying problems.
- **Sitemap Submission:** Submit my sitemap to help Google index my pages better.
- **URL Inspection:** Inspect specific URLs to see if they're indexed and identify any issues.

Best for:

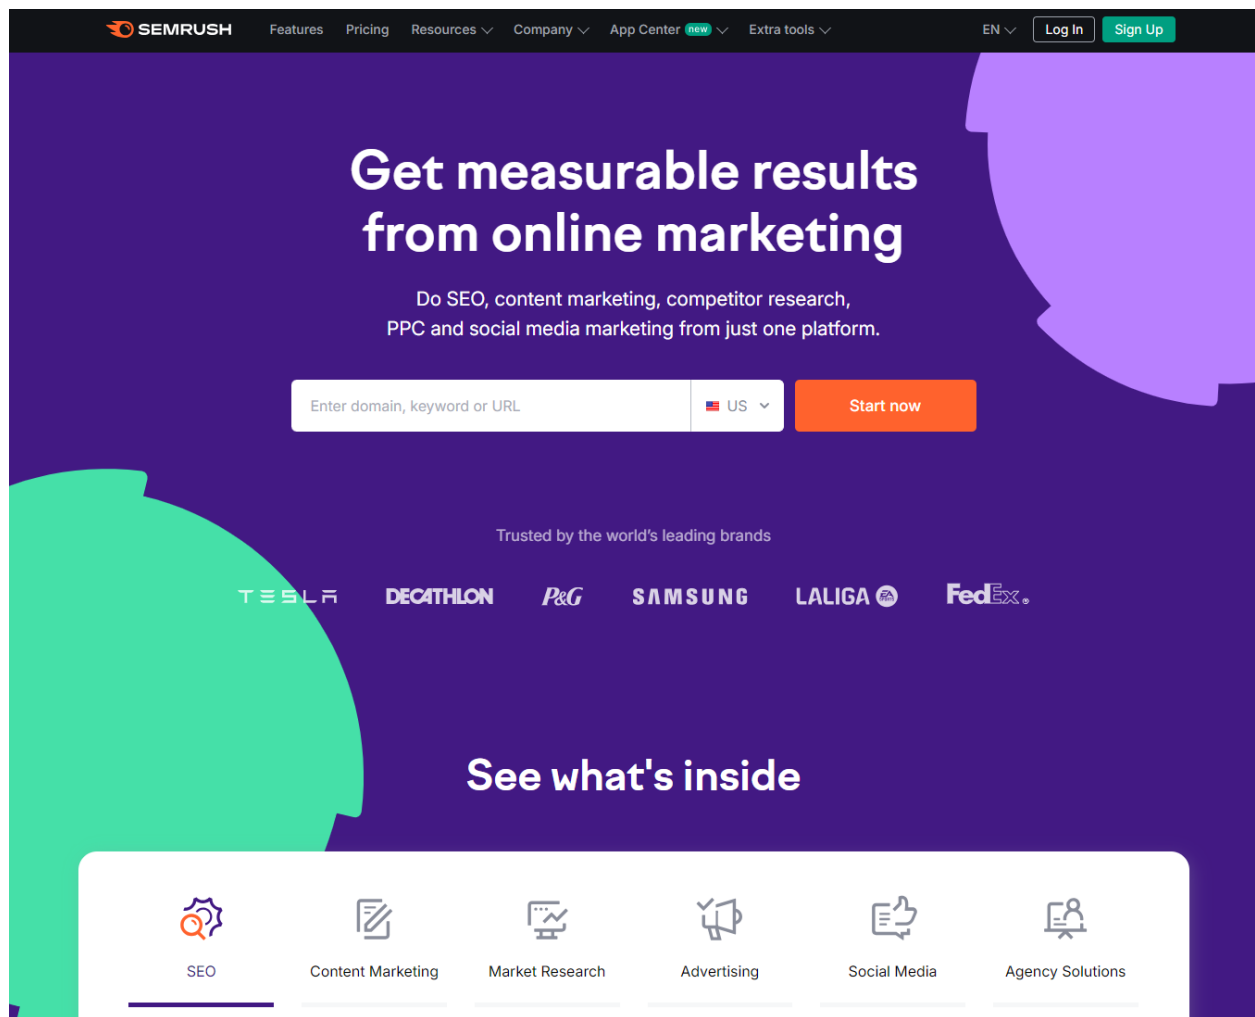

Google Search Console is definitely a must-have for bloggers and marketers who want to check how their blog is doing on Google and improve their rankings.

I strongly recommend it if you manage your own website.

However, if you don't have access to your web host's settings, you might find it tricky to verify your website, which you have to do before you can start using the Google Search Console.

Pricing: Free

17). [SEMrush](#)

Semrush is a premium tool that can really boost your blog's SEO. It's pricey, but it's worth it because it does so much.

With Semrush, you can discover long-tail keywords that are most likely to drive organic traffic.

I used Semrush almost every day. It helped me out-rank my competitors and find the most popular pages on their sites.

By recreating those pages with more detail, I got my blog to rank quickly.

Semrush also helps you discover your main paid search competitors and see which keywords they're bidding on.

You can even study their regional presence and the makeup of their ads. This info is crucial for creating and managing your own paid strategies.

- Want to know what your competitors are doing?

- What are their best keywords?
- How well are your ads performing?

Semrush answers these questions and more. It's an invaluable tool for SEO tips and keyword research.

One of my favorite features is the **“traffic cost”** metric. It shows how much a competing site's web traffic would cost on a PPC basis. This helps you gauge the effectiveness of your SEO efforts.

Why I love SEMrush:

- **Keyword Research:** Find the best keywords to target for more search engine traffic.
- **Competitor Analysis:** Finds out what my competitors are doing well and use that information to improve my own content.
- **SEO Audit:** It scans my blog for SEO issues, and I get a detailed report on how to fix them.
- **Backlink Analysis:** Identify who is linking to my site and my competitors' sites for better link-building strategies.
- **Content Optimization:** I get suggestions to improve my blog posts for higher search rankings.
- **Ad Research:** I can see which keywords my competitors are bidding on and understand their ad strategies.

Best For:

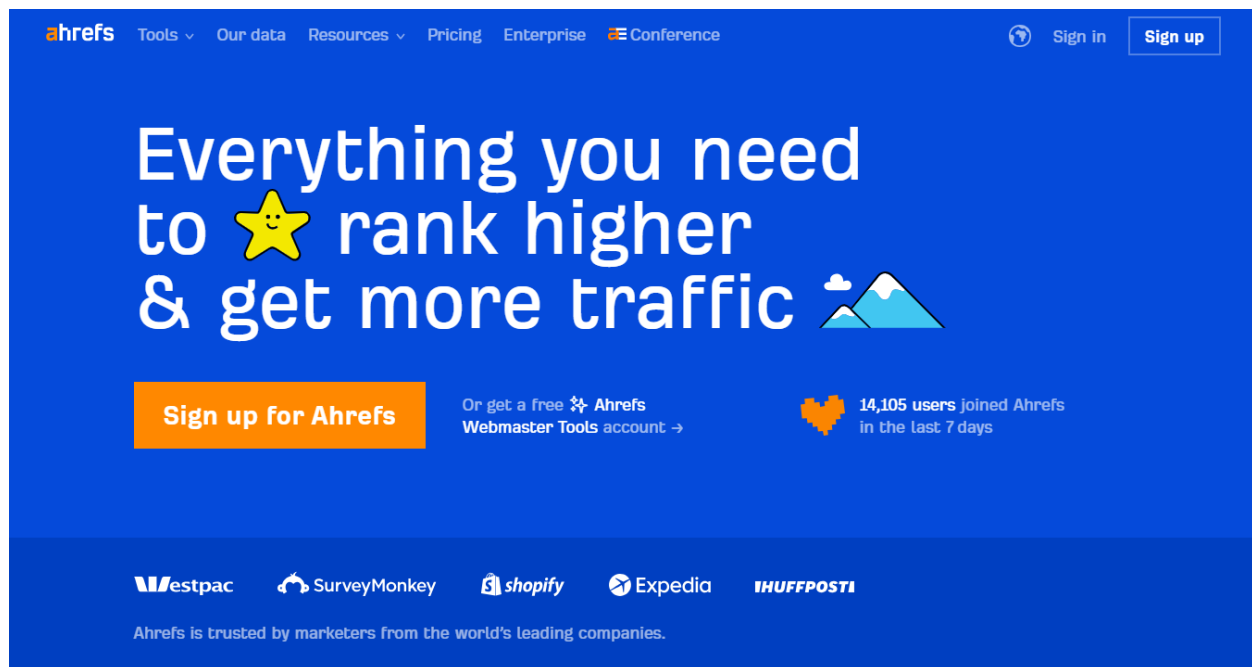

SEMrush is fantastic for bloggers and marketers who have some experience in keyword research.

It's loaded with features that help you optimize your blog, outrank competitors, and understand your audience better.

However, if you're a beginner, you might find it overwhelming. In that case, try using simpler tools like Keyword Planner first.

[Pricing:](#) Paid Plans start at \$139.95 a month.

18). [Ahrefs](#)

Ahrefs offers tools like SEMrush and MOZ but stands out in some key areas.

It's a great tool for staying updated in your niche, sending alerts when there are changes so you can tweak your marketing. It's also fantastic for backlink analysis, with a superior database.

I use Ahrefs for many tasks, but it's especially useful for keyword research and finding backlinks.

One feature I use a lot is the Content Gap report in the Site Explorer tool. It helps me see what keywords my competitors are ranking for that I'm missing out on.

Of course, that's just the tip of the iceberg—Ahrefs has many more features to explore.

Ahrefs is an all-in-one SEO and blogging tool. Its keyword and site explorer features help you see what keywords your competitors rank for and how to achieve similar success.

You can track your blog's keyword rankings, monitor changes over time, and see how much traffic your posts bring in.

Why I love Ahrefs:

- **Keyword Research:** Ahrefs helps you find the best keywords to use in your blog posts so your blog's content can rank higher in search results and get more readers.
- **Backlink Analysis:** You can see who's linking to your blog and find opportunities to get more backlinks, boosting your site's authority and traffic.
- **Content Gap Analysis:** Ahrefs shows you what keywords your competitors are ranking for that you're not, helping you create better content to fill those gaps.

- **Rank Tracking:** Track how your blog ranks for different keywords over time, making it easy to see what's working and what needs improvement.
- **Site Audit:** Ahrefs scans your blog for technical issues that could hurt your SEO and provides a list of fixes to increase your site's performance.
- **Alerts:** Ahrefs sends you alerts about new backlinks, keyword rankings, and mentions of your site, keeping you updated and on top of your SEO game.

Best For:

Ahrefs is fantastic for bloggers because it provides all the tools you need in one place. It helps you find the right keywords, understand what content works best, and keep track of your blog's performance.

With Ahrefs, you can stay ahead of your competitors and make sure your blog attracts and engages readers.

[Pricing:](#) Paid plans start at \$129 a month.

Tools for Blog Images

I think we can all agree long blocks of text in a blog post can quickly bore readers. To keep your readers engaged, adding images is just as important as writing.

Most blog posts use graphics and photos to:

- Make data and numbers more interesting with charts
- Help readers understand abstract concepts
- Show relationships and hierarchy
- Provide context with location and size
- Break up large blocks of text
- Demonstrate processes step-by-step

Graphics and photos also give you the opportunity to make your blog appear on a search engine result page (SERP) feature called an image pack.

Feedback

You should include multiple images (**custom graphics and photos**) in your blog posts.

Whether you want to create custom images or use stock photos, these tools help you out. Let's take a look at them.

19). [Canva](#)

Canva is probably the most used image tool for my blogs.

It is a web-based graphic design platform that's perfect for creating custom blog graphics, social media posts, logos, and more. Its drag-and-drop editing system is super easy to use, even if you're not a designer.

One of Canva's standout features is its huge library of pre-designed templates. You can easily adjust these templates to suit your needs, so you don't have to start from scratch.

Canva offers a free version that's great for creating graphics for your blog posts. If you need more advanced features, like branding kits and access to a larger image library, you can opt for the premium version.

I use Canva to design featured images and social media graphics for my blog. It's user-friendly and helps me produce high-quality graphics quickly.

Almost every original image you see on my social accounts was made with Canva.

So, if you want your blog posts to get noticed faster, ensure you have great images, and Canva can help you with this.

Just remember to be mindful of copyright when using images—opt for free stock images from sites like Unsplash, Pixabay, and Pexels, and always give credit where it's due.

Why I love Canva:

- **Easy-to-Use Interface:** Canvas drag-and-drop design is super simple, even if you know nothing about design.

- **Customizable Templates:** You get to pick from a variety of templates for blog posts, social media, and more. You can also adjust them easily to match your style.
- **Design Elements:** Canva offers a huge selection of fonts, images, icons, and illustrations to enhance your graphics.
- **Collaborative Features:** If you work with a team, Canva lets you share designs and work together in real-time.
- **Brand Kit:** Store your brand's colors, fonts, and logos in one place to keep your blog's look consistent.
- **Free and Paid Options:** There's a lot you can do with the free version, but the paid version offers even more features and resources.

Best For:

Any blogger, whether you're working alone or with a team.

It's especially great for larger blogging teams or marketing groups because of its strong collaboration tools.

You can create a library of branded templates to keep everything looking professional.

It's a great choice if you need more powerful design and teamwork features compared to other tools like Design Wizard.

Pricing: Free, Paid plans start at \$120 per month.

20). Death To Stock

Death to Stock is a fantastic resource if you're looking for high-quality lifestyle photos.

Each month, they send out a new set of over 35 high-resolution images, so you always have fresh content to choose from.

Plus, you get access to a huge archive with over 4,500 photos, which is a real asset for any blogger or content creator.

This service was designed to make it easy for you to find great images without the usual going from one site to another.

You can either buy images outright or rent them, which gives you flexibility based on your needs.

They also offer a premium subscription if you want to have access to their full archive and find even more options.

With Death to Stock, you'll have a steady stream of quality images and save time and money compared to searching the web or paying high fees elsewhere.

Why I love Death to Stock:

- **Authentic Imagery:** Real and genuine photos, avoiding staged stock photo look.
- **High-Resolution Photos:** Ensures great quality for websites, print, or social media.
- **Fresh Monthly Packs:** Themed photo packs are delivered every month.
- **Diverse Collection:** Wide range of categories, from landscapes to portraits.
- **Licensing and Usage Rights:** Simple license for personal and commercial use.
- **Creative Inspiration:** Unique style that sparks creativity.
- **Flexible Subscription Plans:** Various plans are available to fit different needs and budgets.
- **Easy-to-Use Platform:** User-friendly website for browsing, searching, and downloading photos.

Best For:

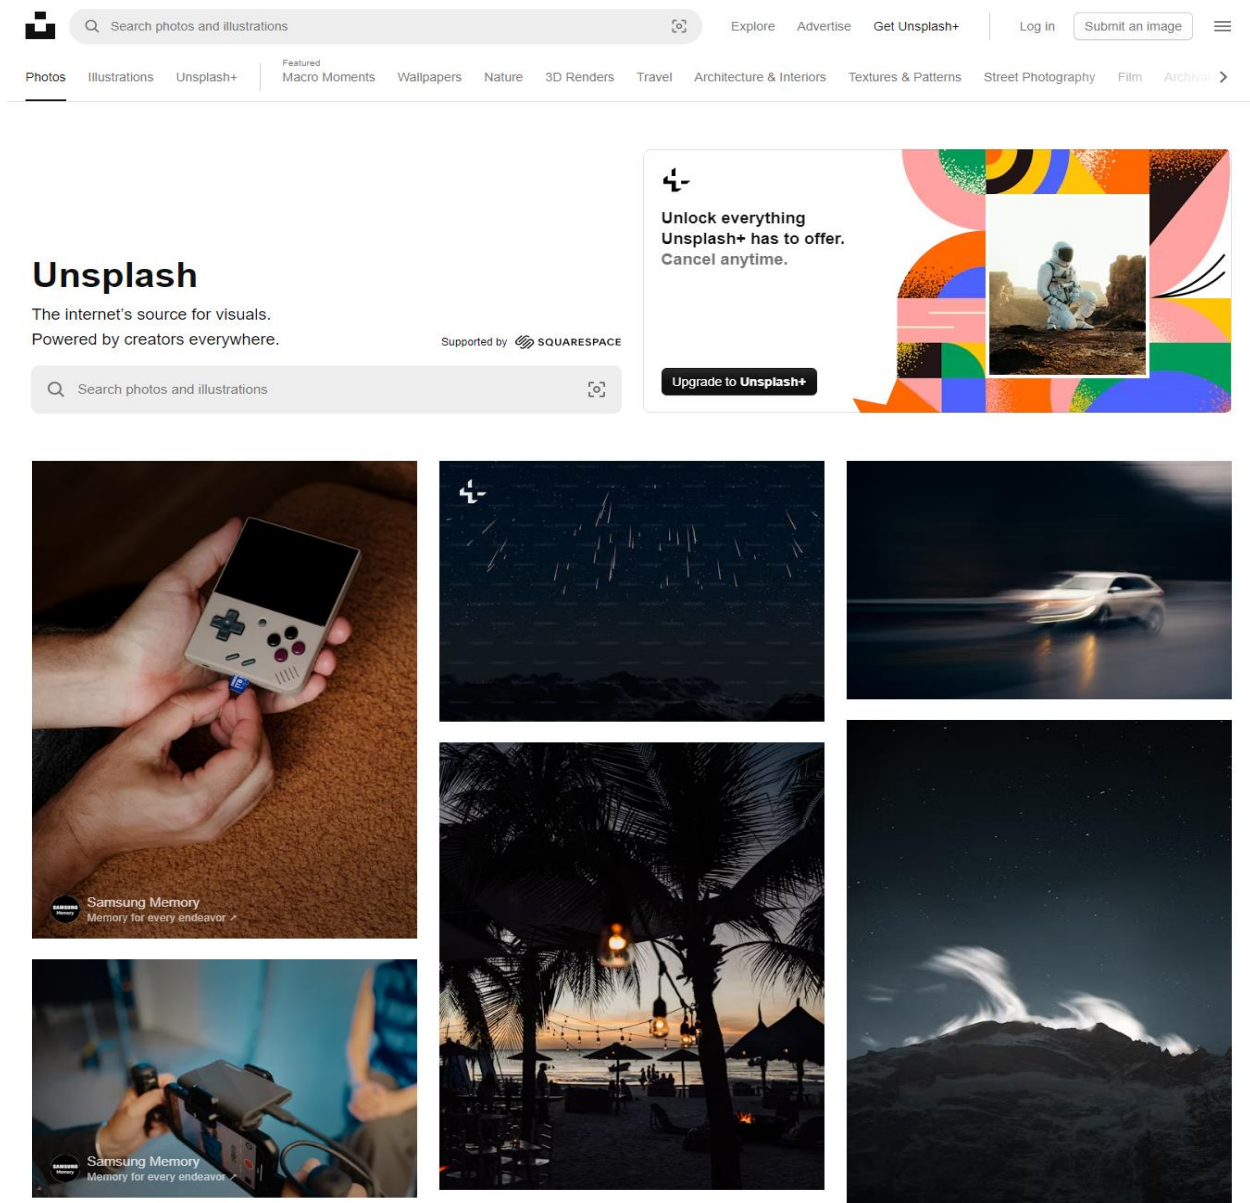

Death to Stock is perfect for bloggers and marketers looking for standout images for their blog posts, carousels, galleries, and headers.

If you're in an aesthetic or artistic field, their unique visuals will give your blog a special touch.

They make it easy to access high-quality photos without spending a lot of time searching or paying high fees.

Pricing: Paid Plans start at \$15 a month.

21). [Unsplash](https://unsplash.com)

If you need free images, Unsplash is a fantastic resource for high-resolution photos that you can use anywhere, including for commercial purposes, at no cost.

I use the high-quality photos I get from this site in the Canva Graphics for my blog posts- such as featured images and photos to give my readers a visual show of what I am talking about.

Why I love Unsplash:

- **High-Quality Images:** Access a huge library of professional, high-resolution photos that make your blog posts stand out.

- **Completely Free:** You don't have to worry about paying for images. Everything on Unsplash is free to use, even for commercial purposes.
- **Easy Search:** Finding the perfect image is quick and easy with Unsplash's simple search function and well-organized categories.
- **Fresh Content:** New photos are added regularly, so you'll always find something new and relevant to your content.
- **No Attribution Required:** While it's nice to credit the photographers, it's not mandatory, giving you flexibility in how you use the images.
- **Diverse Selection:** From nature to technology, Unsplash offers a wide range of images to fit any blog topic or theme.

Best for:

Unsplash is a fantastic tool for bloggers because it offers a vast selection of high-quality images at no cost.

Whether you're writing about travel, tech, or lifestyle, you'll find the perfect photo to complement your content.

The easy-to-use search function saves time, and with no requirement to credit photographers, you have the freedom to use images as you see fit.

Pricing: Free

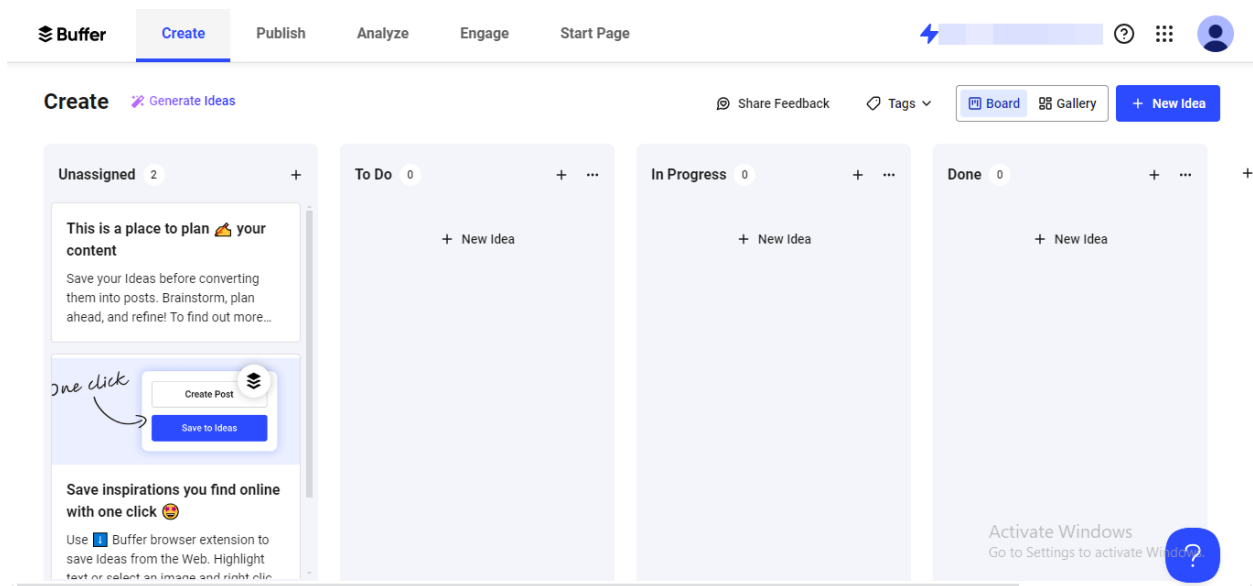

Tools for Blog Promotion

Once you are done with the writing, the next thing on the list is to promote your blog so your target audience can find, read, and even share it.

After all, what is the point of going through all that trouble to plan, write, and optimize your blog if you don't bother to promote it?

Below, I will show you some tools that can help get your content in front of people in no time so that you can convert visitors into leads.

22). [Buffer](#)

After several hours of researching and writing, the idea of uploading and posting your blog post to four different social media channels can be stressful and a waste of time.

If your blogging platform does not include a built-in social tool, you can use a third-party tool like Buffer to automate this process.

Buffer makes it simple to post updates across channels from one dashboard and track how my blog posts are doing without having to log in to each channel separately.

All you have to do is schedule your new article to go to your social media channels several times with different headlines or images attached to each update.

Why I love Buffer:

- **Easy Social Media Scheduling:** Schedule your social media posts in advance, keeping your content consistent without daily effort.
- **Simple Interface:** Manage all your social media accounts effortlessly with a clean, user-friendly interface.
- **Post Analytics:** Track how your posts are performing, helping you understand what works best.
- **Content Calendar:** Schedule all your posts ahead of time with a built-in content calendar for a clear social media strategy.
- **Team Collaboration:** Allow multiple users to manage and schedule posts, making teamwork very easy.

Best for:

Buffer is an excellent choice for freelance bloggers and small business marketing teams because it's affordable and packed with powerful features.

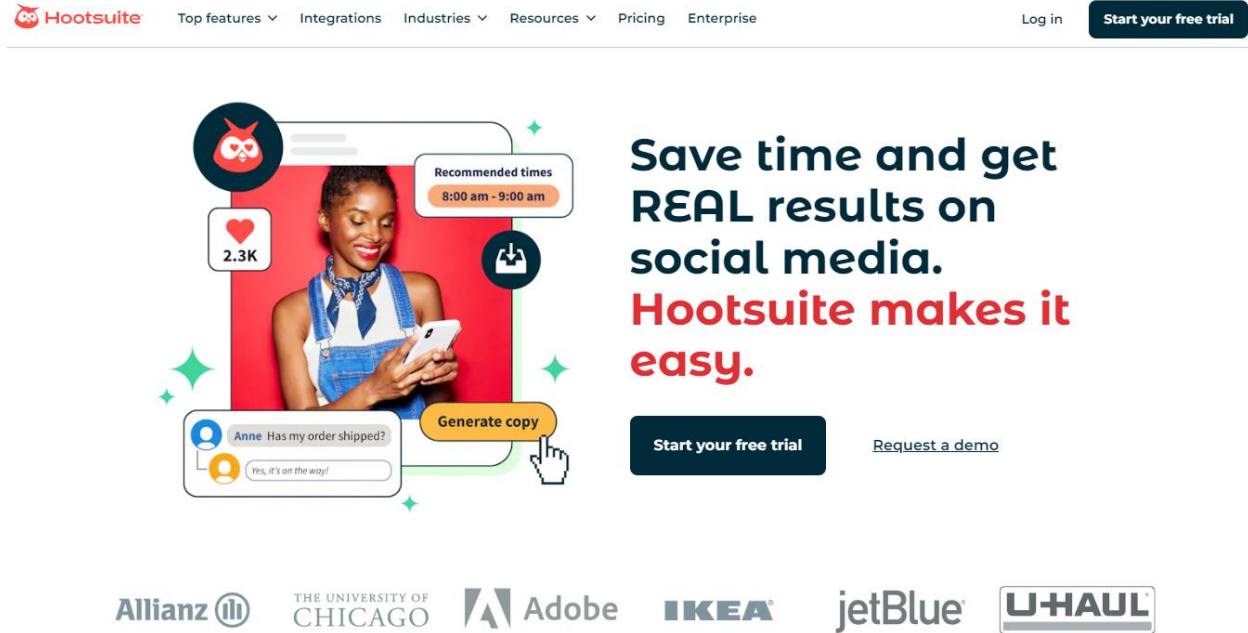

You can easily schedule posts, track performance, and work with your team without spending a lot of money.

However, if you're already using a tool like Marketing Hub to schedule posts, you might not need Buffer.

But for those looking for a simple and effective way to manage their social media, Buffer is a top pick.

Pricing: Free, Paid plans start at \$5 a month.

23). [HootSuite](#)

The banner features a woman in a blue denim vest over a white shirt, holding a smartphone. To her left is a circular icon with a red owl and a heart icon with '2.3K'. Above her is a 'Recommended times' box showing '8:00 am - 9:00 am'. Below her is a chat bubble with a message from 'Anne' asking 'Has my order shipped?' and a response 'Yes, it's on the way!'. A 'Generate copy' button is positioned next to the chat bubble. To the right of the woman is a large text block: 'Save time and get REAL results on social media. Hootsuite makes it easy.' Below this text are two buttons: 'Start your free trial' and 'Request a demo'. At the bottom of the banner are logos for Allianz, The University of Chicago, Adobe, IKEA, jetBlue, and U-HAUL.

Posts
48 posts

Too many blog owners are bad at social. You don't have to be part of this group.

More like Buffer, Hootsuite is another tool you can use to promote your blog posts.

You can confidently schedule posts across different social networks (***whatever popular social network you can think of – It's possible***).

You can also manage both organic and paid social content, track reader conversations, and get real-time insights from social media to help make decisions about your blog.

I am one who always pursues learning new things, and I think the reason I was drawn to HootSuite is that it sets one up for success with its expert certifications, training, and coaching in social marketing, social commerce, and many more.

If you're looking for a Facebook scheduler, LinkedIn scheduler, or Pinterest scheduler, Hootsuite will work for you.

One of the best things about Hootsuite is that It provides a single user with a social media dashboard for three accounts.

You can also set up a posting schedule and set up to 30 messages in advance.

Why I love Hootsuite:

- **Social Media Scheduling:** Easily plan and schedule your blog posts across multiple platforms, keeping your content calendar organized.
- **Analytics and Reporting:** Track how your blog post is performing on social media and use the data to improve your content strategy.
- **Content Curation:** Discover trending topics and relevant content to share or inspire your blog posts, keeping your content fresh and engaging.
- **Team Collaboration:** Collaborate with team members by assigning tasks, reviewing content, and managing social media campaigns together.
- **Post Boosting:** Promote your top-performing blog posts with just a click, increasing visibility and reach by turning them into paid ads.
- **Integration with Other Tools:** Easily connect with tools like Google Drive, Dropbox, and Canva, streamlining your content creation and promotion process.

Best for:

If you're juggling multiple platforms and need a tool that can help you plan, post, and analyze your blog promotions, Hootsuite is a great choice.

It's especially useful for bloggers who want to maintain a consistent presence online and need detailed insights to refine their content strategy.

Whether you're a solo blogger or part of a team, Hootsuite makes it easy to stay organized, track performance, and engage with your audience.

[Pricing:](#) Paid plans start at \$99 a month.

Tools for Email Marketing

Another way in which you can promote your blogs is through email marketing.

You can use emails to promote not just your blog posts through RSS campaigns, but if you also offer products or services, you can push them through emails.

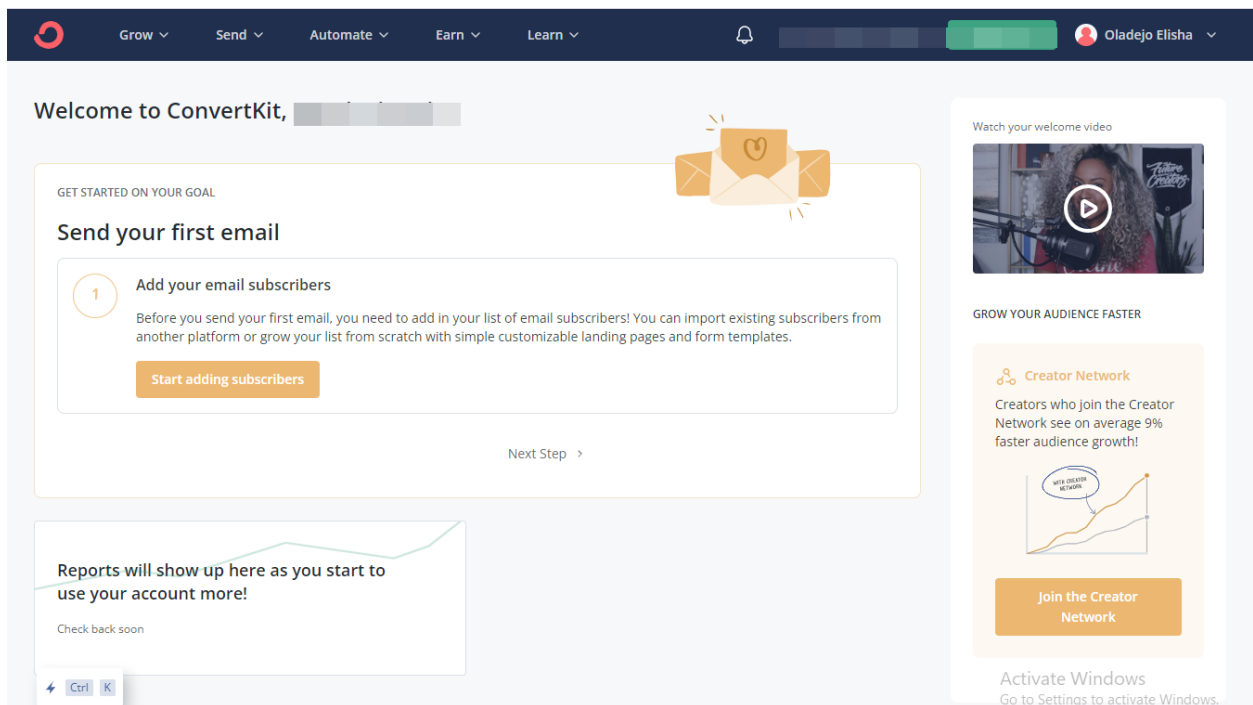

With emails, you can build loyalty, trust, and rapport with your blog's audience.

However, I recommend that you have at least 30 high-quality content pieces before you start your email marketing campaigns so that you will have enough valuable resources to share with your email subscribers.

In the past, I used tools like Constant Contact, Mailchimp, and Keap (formerly InfusionSoft), but now I use two different email marketing tools.

If you're ready to use email marketing for your blogs, here are two tools that have worked well for me:

24). [ConvertKit](#)

If you are yet to start with email marketing, Convertkit is the perfect place to start.

Unlike other email marketing tools like Mailchimp and other competitors, this tool is designed to turn casual readers into dedicated audiences.

I really like how easy and intuitive ConvertKit is. I have tried a handful of other email marketing tools—but none of them were as simple as ConvertKit.

I also appreciate its automation features, which let me set up custom email campaigns for different parts of my audience.

This helps me send more personalized emails and keeps people more engaged.

With ConvertKit, you can create landing pages, customize email marketing campaigns, and even construct sign-up forms that allow your audience to stay up to date with your upcoming content.

As a beginner blogger, you can make use of the free plan, which gives you access to 1000 subscribers.

Why I love ConvertKit:

- **Email Marketing Made Simple:** ConvertKit lets you create and send emails effortlessly, helping you stay connected with your readers and build a loyal audience.
- **Automations That Save Time:** You can set up email sequences that automatically send the right content to your subscribers at the right time, making your email marketing more efficient.
- **Customizable Sign-Up Forms:** With ConvertKit, you can easily create beautiful sign-up forms to grow your email list, making it easy for visitors to subscribe to your blog.
- **Tagging and Segmentation:** Organize your subscribers by tagging them based on their interests or actions so you can send more targeted and significant content.
- **Landing Pages:** ConvertKit offers ready-to-use landing pages, perfect for promoting your blog, special offers, or lead magnets without needing a separate website.
- **Integrations:** ConvertKit integrates with many tools like WordPress, Shopify, and Teachable, allowing you to connect all your favorite tools and making your work easier.

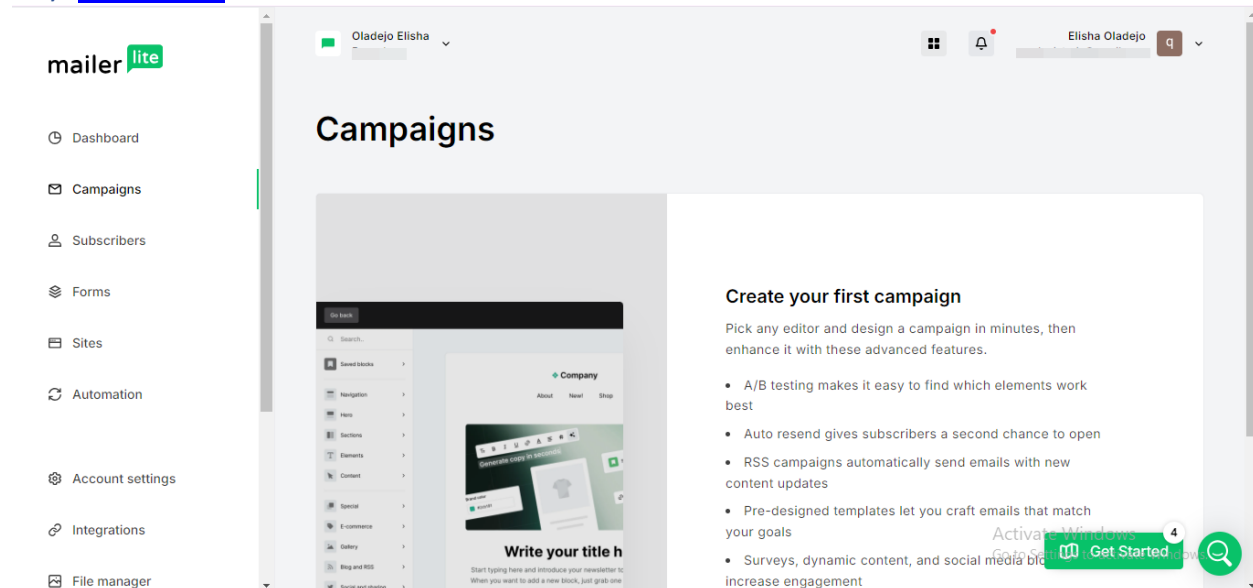

Best for:

ConvertKit is a fantastic tool for bloggers because it's designed with creators in mind.

Whether you're just starting or have an established blog, ConvertKit helps you grow your email list, nurture your readers, and turn them into loyal followers.

[Pricing](#): Free, Paid plans start at \$25 a month.

25). [Mailerlite](#)

Aside from ConvertKit, Mailerlite is also suitable for bloggers who have not started with their email marketing.

Like ConvertKit, it offers a free version where you can easily create landing pages, sign-up forms, and send emails to 1,000 subscribers.

This email marketing platform is user-friendly, with a drag-and-drop email builder and the ability to tag users in groups.

You can easily make eye-catching newsletters and campaigns, and it also includes features like automation, landing pages, and subscriber segmentation.

If you are a beginner blogger, you can use MailerLite if, for some reason, ConvertKit does not interest you.

Why I love MailerLite:

- **Simple Email Builder:** MailerLite's drag-and-drop builder lets you create beautiful emails quickly. No design skills are needed—just add your content and go.
- **Automated Campaigns:** Set up automatic email sequences to send the right message at the right time. Whether it's welcoming new subscribers or following up, MailerLite takes care of it.
- **Customizable Forms:** Design sign-up forms that match your blog's style. Choose from pop-ups, embedded forms, and more to make subscribing easy for your visitors.
- **Landing Pages:** Create professional landing pages without coding. Use them to promote your blog's special offers or capture more subscribers.

- **Audience Segmentation:** Organize your list into groups based on interests or actions.

Best for:

Bloggers who are just starting out or want an easy way to manage their email marketing.

It's perfect if you want simple tools to create and send emails, set up automated messages, and grow your email list without getting overwhelmed.

If you need a budget-friendly option, MailerLite's free plan and easy-to-use features make it a top choice.

Pricing: Free, Paid plans start at \$9 per month.

Final Thoughts on Blogging Tools

There you have it.

You can see that blogging isn't as straightforward as it may seem. With so much competition out there and must-have requirements, being a blogger is all about being a multitasker.

You need to be a designer, a content writer, a website maintainer, and many more.

The tools in this guide are ones I've used myself and, in my opinion, I think are worth investing in (***if you have the need for what they do***).

With the right blogging tools, you can produce better content more quickly, get more from your blog articles, and grow faster.

You can use the tools I listed interchangeably so you can handle all aspects of the content creation process — from topic and keyword research to content planning and promotion.

Some of these tools may not be effective for you, but you always have the free will to decide what's good for you and what is not.

Always check and try new blogging tools in the market.

With the help of the right tools, blogging becomes easier, and your blog definitely has the chance to rank higher on Google.
